September Edition 2011

Baden Powell College

Shady Places successfully quoted Baden Powell College in Hoppers Crossing, to design, manufacture and install these impressive shade structures in 2009. School principal Julie Mason has happily provided a testimonial illustrating the positive outcome for the college.

"Steve Goodwin of Shady Places has provided excellent service to Baden Powell College on many occasions. The quotes provided have been very competitive and all projects have been completed in a timely manner. Steve is very professional in his business demeanour and very approachable when working in the school environment.

Steve has had a substantial contract with Baden Powell College due to his service being hard to beat.

I would have no hesitation to recommend Steve and his business"

Did you know? We only use Australian made structural steel for our shade structures.

We manufacture all components for the posts and re-galvanize any welds to prevent rust from occurring.

We personally install all our own posts and sails, alleviating the need for a middleman, which then allows our costs to the customer to be more manageable.

If desired by the customer the posts can be powder-coated in their choice of color to match existing buildings or playground equipment.

We only use marine grade 316 stainless steel hardware and fittings on all our structures to ensure that our customers have the best quality product that we can supply.

Little River Primary School

These shades were installed at Little River Primary School in 2009. Combining three single counter levered umbrellas side by side to create a shaded outdoor learning area, along with a six post hip/ridge structure over their sandpit and play area, finishing off the project with a four twisted connecting shade sails over seating area, to create a practical and imaginative outdoor area for the students to enjoy.
